Curls From the President's Platter
By Paul Shotola

You will notice that the "Curls" column is no longer on the front page of the newsletter. I asked your Editor, **Don McCloskey** to make this change because my thoughts and ramblings are not the most important items in your newsletter. Happenings at your club, both past and present are the most important, so here I am, somewhere in the back. I hope you still read it, even if it's not "front page".

By the time you receive this newsletter, we'll be coming up on our annual Holiday

Party. Your intrepid club Secretary, **Marie Hunter** (whose meeting minutes are generally more amusing than my scribblings) has generously offered to organize the event. All of you are cordially invited to attend, and bring your spouses, significant others (choose from one of the above), and your kids, grandchildren, and anyone else whom you feel would enjoy meeting the rest of us. There's no cover charge this month, not even a raffle. We will have some door prizes, though, and plenty to eat. Marie will have more information on the party elsewhere in this issue.

I hope all of you attend in December, as in addition to the party, we will be electing a new Vice-President and reelecting our Treasurer. There's always business to be dealt with, isn't there?

Thanks are due to the folks who have recently volunteered to head some of our committees. **Andy Kuby** will be taking care of Membership Services. Keeping track of 180 plus members, with new guests and members at every meeting is a daunting task, and vitally important to our club. **Harris Barbier** has expertly taken care of Membership for quite a while, and we thank him for his service. Binh Pho will be recruiting and scheduling our Guest Demonstrators for the coming year. My wife and significant other, **Janice**, will be providing some administrative assistance. **Carole Floate** (with at least a little help from **Bill**), has done a tremendous job with Demos in the past, and deserves our thanks for bringing the best teachers the turning world has to offer to our club. Volunteerism is alive and well at the CWT, and we all benefit from it. Can I interest you in volunteering?

Since I mentioned my wife, Jan, I have to pass on a little story. Jan receives about 300 mail order catalogs a day (as compared to my 250 daily wood working catalogs), and her favorites are companies that sell personalized stuff, like doormats with your name on them, or shirts for grandchildren we don't yet have that say things like: "I love my Grandma". A recent mailing featured a mailbox sign that said: "An old fisherman and his favorite catch live here". She suggested to me that I make a sign (I'll need to buy more tools for that, you know) that reads: "An old woodturner and his favorite dish live here". Since she caught me at an uncharacteristically sarcastic moment, I replied that it should read: "An old woodturner and his biggest catch live here". She didn't get it, and anyone who fills her in is on setup and cleanup duty for a year.

Till December, turn lots, thank your volunteers, and turn safely.

Dan Anderson's Instructions for Turning Boxes

This is the conclusion to the article on my sanding and finishing demo. To obtain a gallery quality gloss finish is a procedure, not just a finish.

First you have to have the piece sanded to at least 600 grit with all of the sanding marks removed. The finish is a mixture of MINWAX-HELMSMAN-SPAR URETHANE-CLEAR GLOSS and PARKS-PAINT THINNER (this is the green can not the blue one). The Parks and Minwax are mixed 50/50. Mix in a bottle that is about 10 oz. size and leave a small air gap at the top. The air gap will help with the mixing.

Before you start applying the finish remove all of the sawdust from the piece. Start by applying a heavy coat of finish, this coat will soon start to soak in. Keep applying finish until you stop seeing dull spots. During this procedure keep the piece turning on the lathe at a slow speed. Let the piece dry overnight and repeat the procedure. After the piece stops soaking up the finish you are ready to start obtaining a gloss finish.

If you are doing hollow forms be sure to do this to the inside of the piece. The easy way to do this is to pour the finish inside and coat the entire surface. Next sand the surface with 1500 grit. You are only trying to level the finish not sand the piece. Keep applying coats until all defects in the finish are gone. The best way to apply the finish is with a paper towel. Bounty paper towels are the best for this procedure because they leave no lint. Fold the towel into a small pad and soak with finish, unfold the towel and use like a chamois on the hood of a car. Between coats sand with 1500 wet or dry lubricated with mineral spirits. When you are ready to apply the final coat you need to clean the work area. This is important to keep dust from settling on the wet finish. The procedure described here was not worked out by me but by Steve Sinner. Steve developed this procedure by much trial and error and is still refining it.

Minutes of the November, 2002 CWT Meeting

by Marie Hunter

Announcements were: **Andy Kuby** is taking over the membership duties from **Harris Barbier**. **Janice Shotola** and **Binh Pho** will be assuming the task of securing well known turners to do the special all-day seminars, which **Carole Floate** had been handling. Both Harris and Carole have put in many years as volunteers doing the tasks that demand much attention and time. Kudos to both for a job well done.

Nominations for Vice President were held. **Fran Islin** was nominated. The Treasurer's office is also to be filled for the next two years. **Wayne Bernahl** was nominated at the October meeting. The election will be held at the December meeting. **Harris Barbier** introduced a number of guests. The club now has 180 members. Membership forms for next year were passed out.

Andy Kuby is handling the November 30th Turnaround at Woodcraft. There will be 6 lathes in operation that day, from 10:00 a.m. to 3:00 p.m. If you want to be part of that fun day, contact Andy Kuby. There is an open house at Hardwood Connection in Sycamore on Nov. 23rd. Chain saw carving and hand tool joinery will be part of the entertainment.

George, the Tool Czar thanked **Dick Jacobs** for cataloging the many things in the club library. George also showed the new tools, video tapes, etc. that are in the library for members to use. **Dick Sing** mentioned an open house at the Woodworkers Store at Rt. 47 and Rt. 80 (Morris IL). There will be belt sander races at this affair. Newsletter submissions must be sent to **Don McCloskey** by the 18th of the month. **Joan Nolan** needs input for the website.

The December meeting will be short, to allow time for partying. We will have the election for Vice President and Treasurer. There will also be the raffle and a display of turnings that will not be critiqued. And we will have the Christmas ornament contest, which had originally been scheduled for the Nov. meeting. So bring your handturned ornaments. You may be a lucky winner. Big bucks for the top 3 winners.

"Doc" Sashko did the critique. He did a thorough examination of each turning and gave his diagnosis. Of course, the peanut gallery added their comments.

Dan Anderson gave the demo. His expertise in producing small lidded boxes is fantastic. Thanks, Dan, for a great demo.

TURNING BOXES

by **Dan Anderson**

1. Mount the blank between centers and turn it round
2. Turn shoulders on each end of blank to fit your chuck
3. Separate the top and bottom with parting tool (use of narrow parting tool will help

- grain match)
4. Mount each section in the chuck and rough hollow to 3/8" thickness or so (if a chuck is not available turn recess in waste block mounted on faceplate to fit shoulders cut in step 2 and glue blank to waste block)
 5. Mark blanks with date and # if doing multiples
 6. Set blanks aside and let dry for a minimum of 3 months, longer is better
 7. Mount the dried top blank and reround the outside and finish hollow the inside, taking special care to make sure that the lid flange is parallel to the lathe axis.
 8. True lid rim
 9. Sand and apply finish of choice (do not sand lid flange)
 10. Note the lid depth and inside diameter write it down
 11. Mount the bottom blank and turn outside to true
 12. Start final hollowing, make a starting parting cut to define bottom
 13. Fit top to the bottom with a relatively tight fit
 14. With top mounted to bottom finish turn exterior complete, note use the internal measurements of the top which you made in step 10 to guide you (if adding an insert to the top now is the time) Sand and finish exterior
 15. Remove the now completed top and finish hollow the bottom
 16. Refine the fit now. True the rim surface, sand and finish the inside of the bottom (do not sand the tenon surface)
 17. Part the bottom from waste (note the bottom depth)
 18. Reverse on a jamb chuck to finish turn the bottom of the bottom
 19. Sand, finish and sign your completed box
